

GARAGE EQUIPMENT LIMITED

Pre-fabricated Vehicle Inspection Pits

Fully Working Demonstration Pit Makes our Sales Team Highly Mobile

Everquip have a fully functional life-size pit available for demonstration at your site, complete with pit jack, steps and lighting. This enables you to see the product close-up. Call for further details.

You will also see the demonstration pit at Trade Shows both at home in the UK and abroad.

What Our Clients Are Saying...

Crossroads began working with Everquip. During this time they have provided us with garage equipment and, more recently, their commercial vehicle inspection pits at two of our sites. Crossroads (Volvo) Group enjoys a great working relationship with Everquip Garage Equipment Limited. Good customer service is all about attentiveness and personality. the team at Everquip are

supportive and professional. I would have no problem at all in recommending Everquip to other dealerships.

Mr Mark Johnson
Service Director
Crossroads (Volvo) Group
Stallingborough, North
East Lincs.

A Foundation Built on Innovation and First Class Customer Care

No other commercial inspection pit manufacturer can offer a complete garage equipment service to rival ours.

Everquip enjoy a unique position in the independent garage equipment market. Our inspection pit business is built upon a solid foundation within this sector. For more than 20 years Everquip has been supplying, installing, testing and calibrating garage equipment on a national scale. We have built our reputation as much through our excellent support services as through the quality and comprehensive range of products we provide.

Everquip's customers are located the length and breadth of the United Kingdom and include such prestigious commercial operators as: Crossroads (Volvo) Group; Sir Robert McAlpine Group; DFDS Torline; Kier Group (Construction); SITA Group (Waste Management), as well as a growing number of Local Authorities.

Solutions Tailored to your Needs

Understanding the very specialised yet different natures of the car and commercial vehicle sectors is the key to Everquip's success.

Each inspection pit solution

that we provide is tailored to the individual needs and budgetary constraints of each client; our existing clients not only include large national chains with project budgets in excess of £250,000 but also small owner operator workshops looking to improve their existing business.

Everquip firmly believe that the first rule of business is to listen, and that flexibility and first class customer service go hand in hand, regardless of the size of your business.

Innovation through Listening

Our philosophy includes listening to those that use our Inspection Pits on a regular basis. Any feedback from our clients is taken on board and then incorporated into the relevant stage of the design, planning, installation or commissioning stages.

Confidence for the Future

Everquip's flexibility and customer service ethos has kept the company ahead of its field for over 20 years. Customers can be confident that Everquip's ongoing investment in product development and its continued growth as a national and international supplier will maintain and strengthen our

Old pits are generally dangerous, dimly lit and prone to water ingress from ground water.

Everquip pits come with adequate lighting as standard. All pits are tested for watertightness.

An old brick pit with concrete floor. Note how the floor is damp and that the gloss paint finish is requiring maintenance. Once oil and grease have impregnated the brickwork, no amount of paint will adhere to the pit walls.

The steps are shown here to highlight how the surface degradation provides a potential risk to the safety of operatives.

MEMBERS OF THE GARAGE EQUIPMENT ASSOCIATION

21st Century Workshop Solutions for the Automotive Industry

Traditional inspection pits are of brick or concrete construction, often with poor or inadequate lighting. Many are too deep or awkward to get in to or out of. They are also susceptible to filling up with groundwater.

In addition to this ingress of water, there is also the likelihood of seepage of waste oil, lubrication, fuel and chemical products from the porous materials of the pit into the ground, which means that in addition to health and safety issues, there are also much wider environmental considerations to confront.

FACT: Everquip vehicle inspection pits are precision engineered from fabricated mild steel and are fully sealed before leaving the workshop. Waste products can be pumped away using a range of available products from the sump that is integral to all our pits.

Designed from the ground up

Following a site inspection, Everquip's dedicated Computer Aided Design (CAD) team ensure that each design complies with complex structural calculations which are based upon the specific ground conditions and load bearing requirements for your individual working application. The use of this technology allows us to manufacture pits to any size or specification.

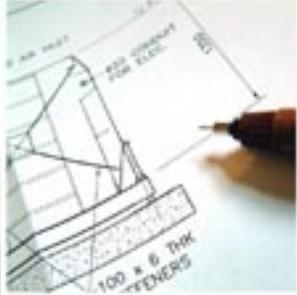

FACT: The unique design of Everquip inspection pits means that they are fully

self-supporting structures that require no additional internal framework on installation.

Build Quality Second to None

Everquip vehicle inspection pits are robust and built to last. Each pit must pass a rigorous Quality Control inspection before leaving our workshop. To support this, each Everquip pit comes with a comprehensive 10-year guarantee.

Experience has shown that the quality and specification of the engineering is reflected in the ease and economy of installation, thereby reducing the overall cost to the customer.

benefits & applications

- Improved working conditions
- H&S Spec Zone & compliant lighting as standard
- No concrete contamination
- Minimal maintenance costs
- Backed by full 10-year guarantee
- Built to your specifications
- Fully sealed for watertightness
- Any size and load bearing capacity
- Suitable for workshop and bodyshop
- Car, light commercial, heavy commercial and specialised applications

A Wealth of Standard Features to Enhance the Working Environment

Standard Features

All pits supplied are sold with a full set of design calculations and a full set of civil engineering drawings if to be installed by a sub-contractor.

All Everquip pits are supplied with an **integrated pit jack rail**, giving a combined lifting capacity of 30 tonnes per axle across both rails.

Fluorescent lighting is fitted as required and is compliant with HSE Zone 2. All internal wiring is contained within **steel conduits**.

Access steps and **escape ladders** are of steel construction and built in accordance with **British Standards**. To increase working space we have designed removable steps that simply lock into place when needed.

Internal compressed air pipework is fitted as standard prior to delivery. Oil pipework can be fitted to your requirements.

A **sump** is an integral part of the design of an Everquip inspection pit. This allows the safe removal of waste oil and spillage.

Optional Features

Internal service area bays can be built to your requirements for storage or oil distribution systems. Where more than one tunnel is required, **joining tunnels** can be incorporated into the design.

Step designs vary according to your specific requirements. Everquip can advise on the most appropriate design - including optional **escape tunnels** and **safety rails**.

Tailored to your Exact Requirements

Everquip pre-fabricated inspection pits are custom built to your specific requirements.

Each project is overseen by a dedicated Project Manager, whose role it is to answer your queries and to recommend additional Everquip services where appropriate.

design features

- Self-supporting design with levelling feet
- Re-inforced sides, floor and roof sections - reduces need to back fill
- Fully sealed against water - can be used where high water tables prevail
 - Mild Steel construction
 - Lubrication bays - pit recesses
- Integrated pit jack rail - up to 30 tonnes axle capacity
- Internal compressed air pipework fitted as standard prior to delivery
- Access steps and escape ladders of steel construction and built in accordance with British Standards

Everquip - the only Choice for all your Workshop Equipment

Oil and waste management systems

Having built our business on the supply and servicing of new and reconditioned garage equipment for more than two decades, we understand how important it is to provide only the best quality products at the best possible price.

Long Term Trading Relationships

Many of our existing clients have been with us from the early days. We are customer focused with a view to creating long term relationships with all our clients. By being your one-stop-shop for all of your garage equipment and inspection pit requirements, we have developed The Whole System...

We are main agents for many of the leading names in the car and commercial workshop, including: Samoa, BM Test Equipment, Stenhøj and Atlas Copco.

The Whole System...

The Whole System... is not only our catch line, but also our tried and tested approach to our dealings with you, the client. We will give you practical advice and guidance on all matters concerning the best choice of equipment for your intended use and budget.

Our range of services extends well beyond the design and installation of our excellent inspection pits. We offer: workshop and bodyshop planning and design service; MOT installation and certification; compressed air ringmain systems; exhaust fume extraction; oil and waste management systems; brake and calibration test systems. We always have an extensive stock of reconditioned garage equipment.

This open approach ensures that you have excellent service standards, not only today, but will into the future.

other products & services

Everquip provide a one-stop shop for all your hardware needs:

- Supply of rotary screw, piston and vane air compressors
- Installation of compressed air ringmain systems
 - Workshop design
- Calibration & certification of MoT testing equipment
 - Diagnostic equipment
 - Exhaust Extraction equipment
 - Lubrication equipment
 - MoT testing bays
- Manufacture, installation, service and repairs to garage equipment
 - Reconditioned equipment
- Finance & leasing options available
